

2.Map of Canada

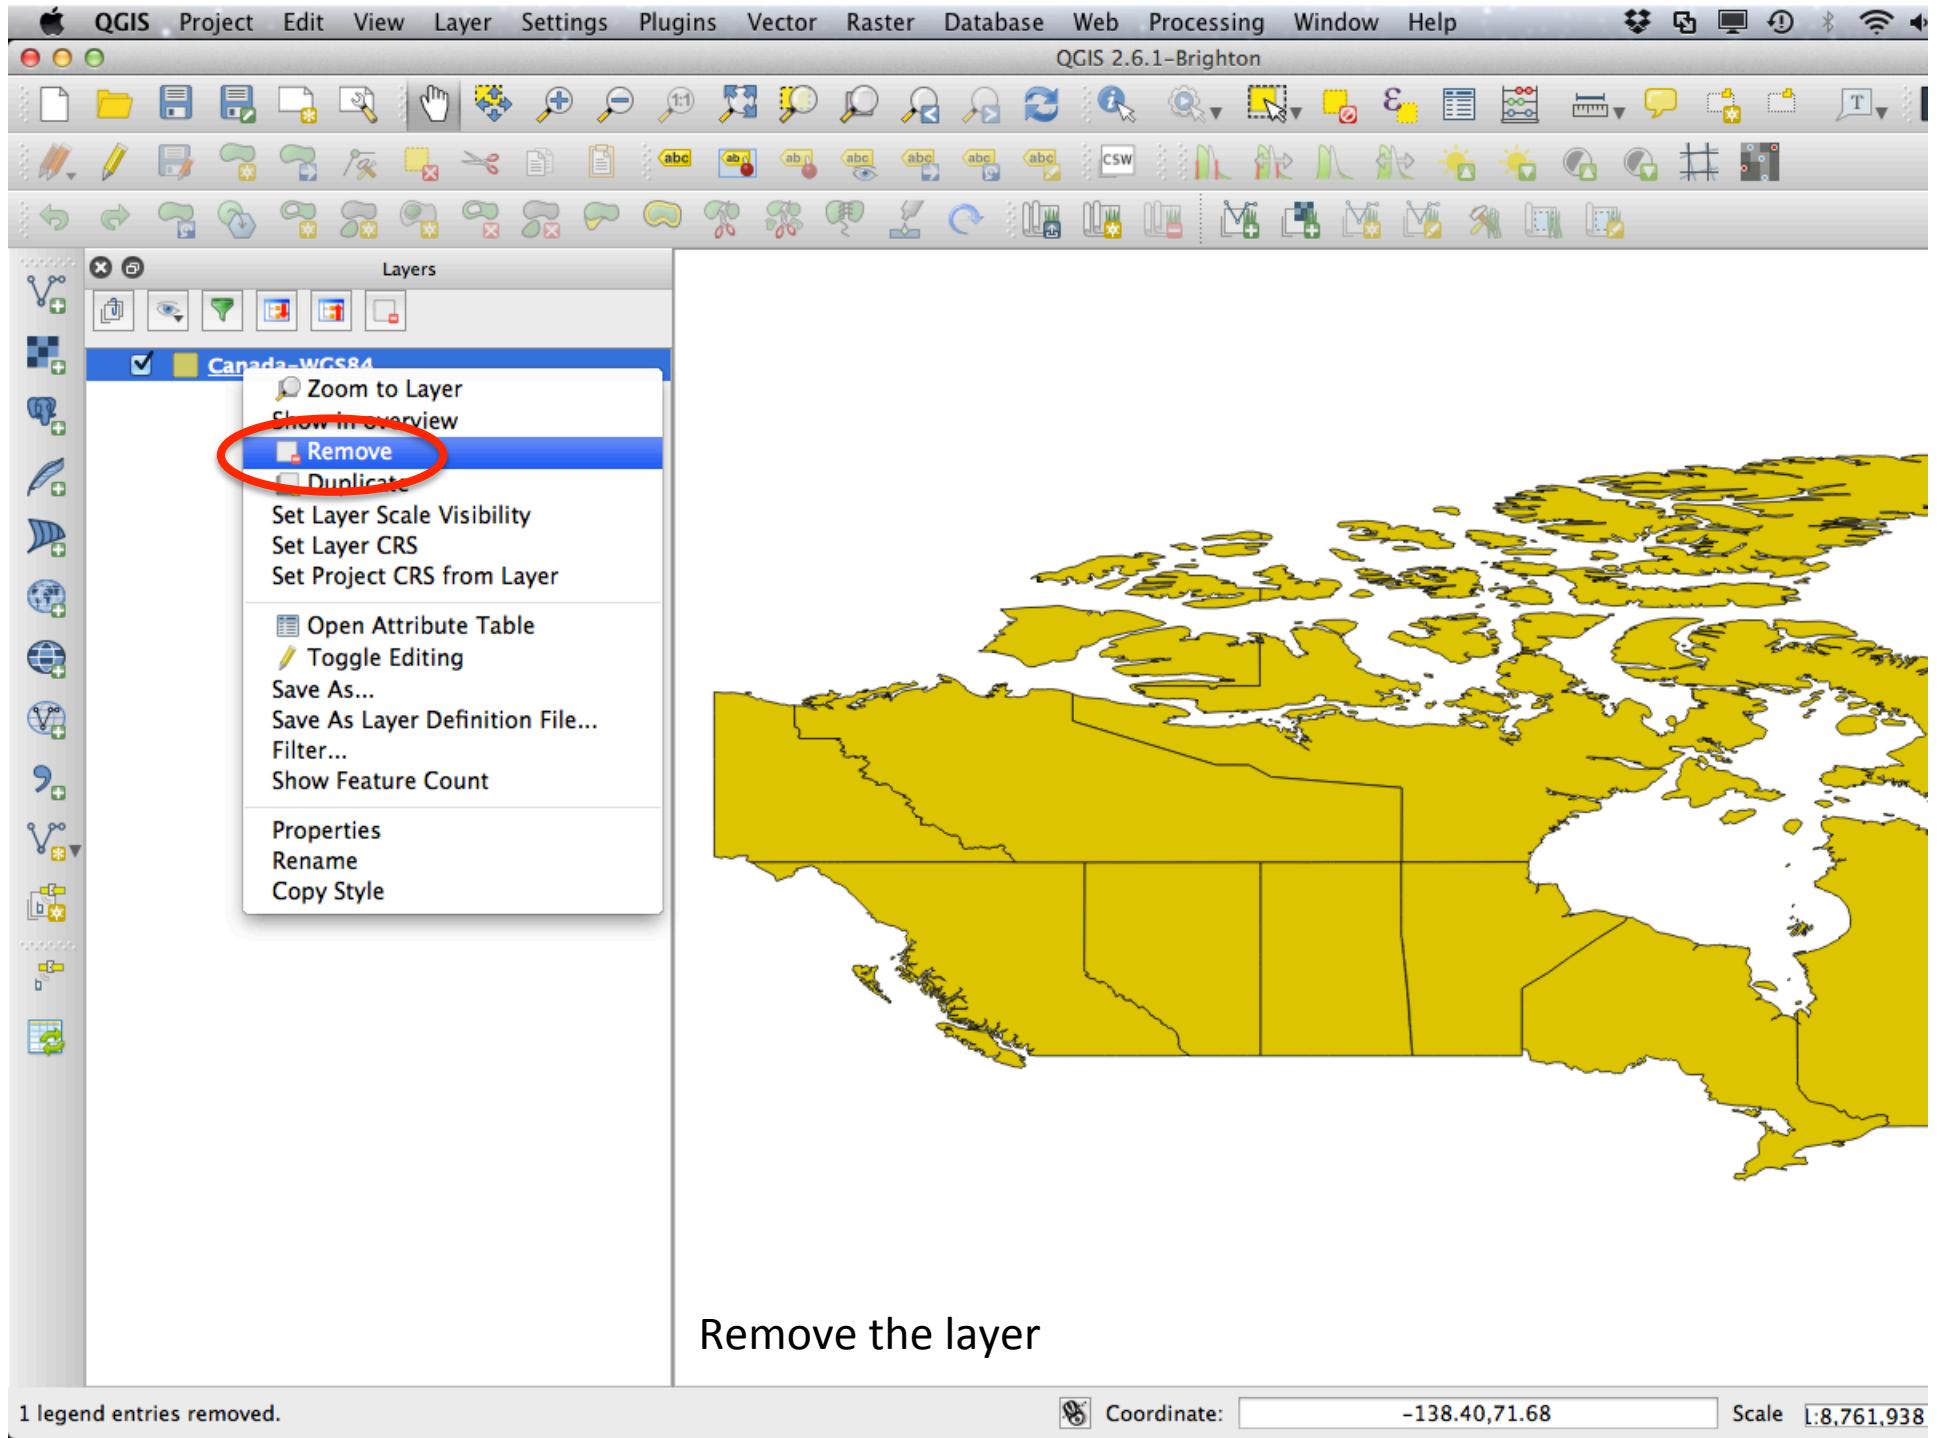

Purpose

- Learn several ways to add data to a QGIS project
- Learn how to pan, zoom, and identify the attributes of various features
- Learn how to save a QGIS project file

Remove the layer

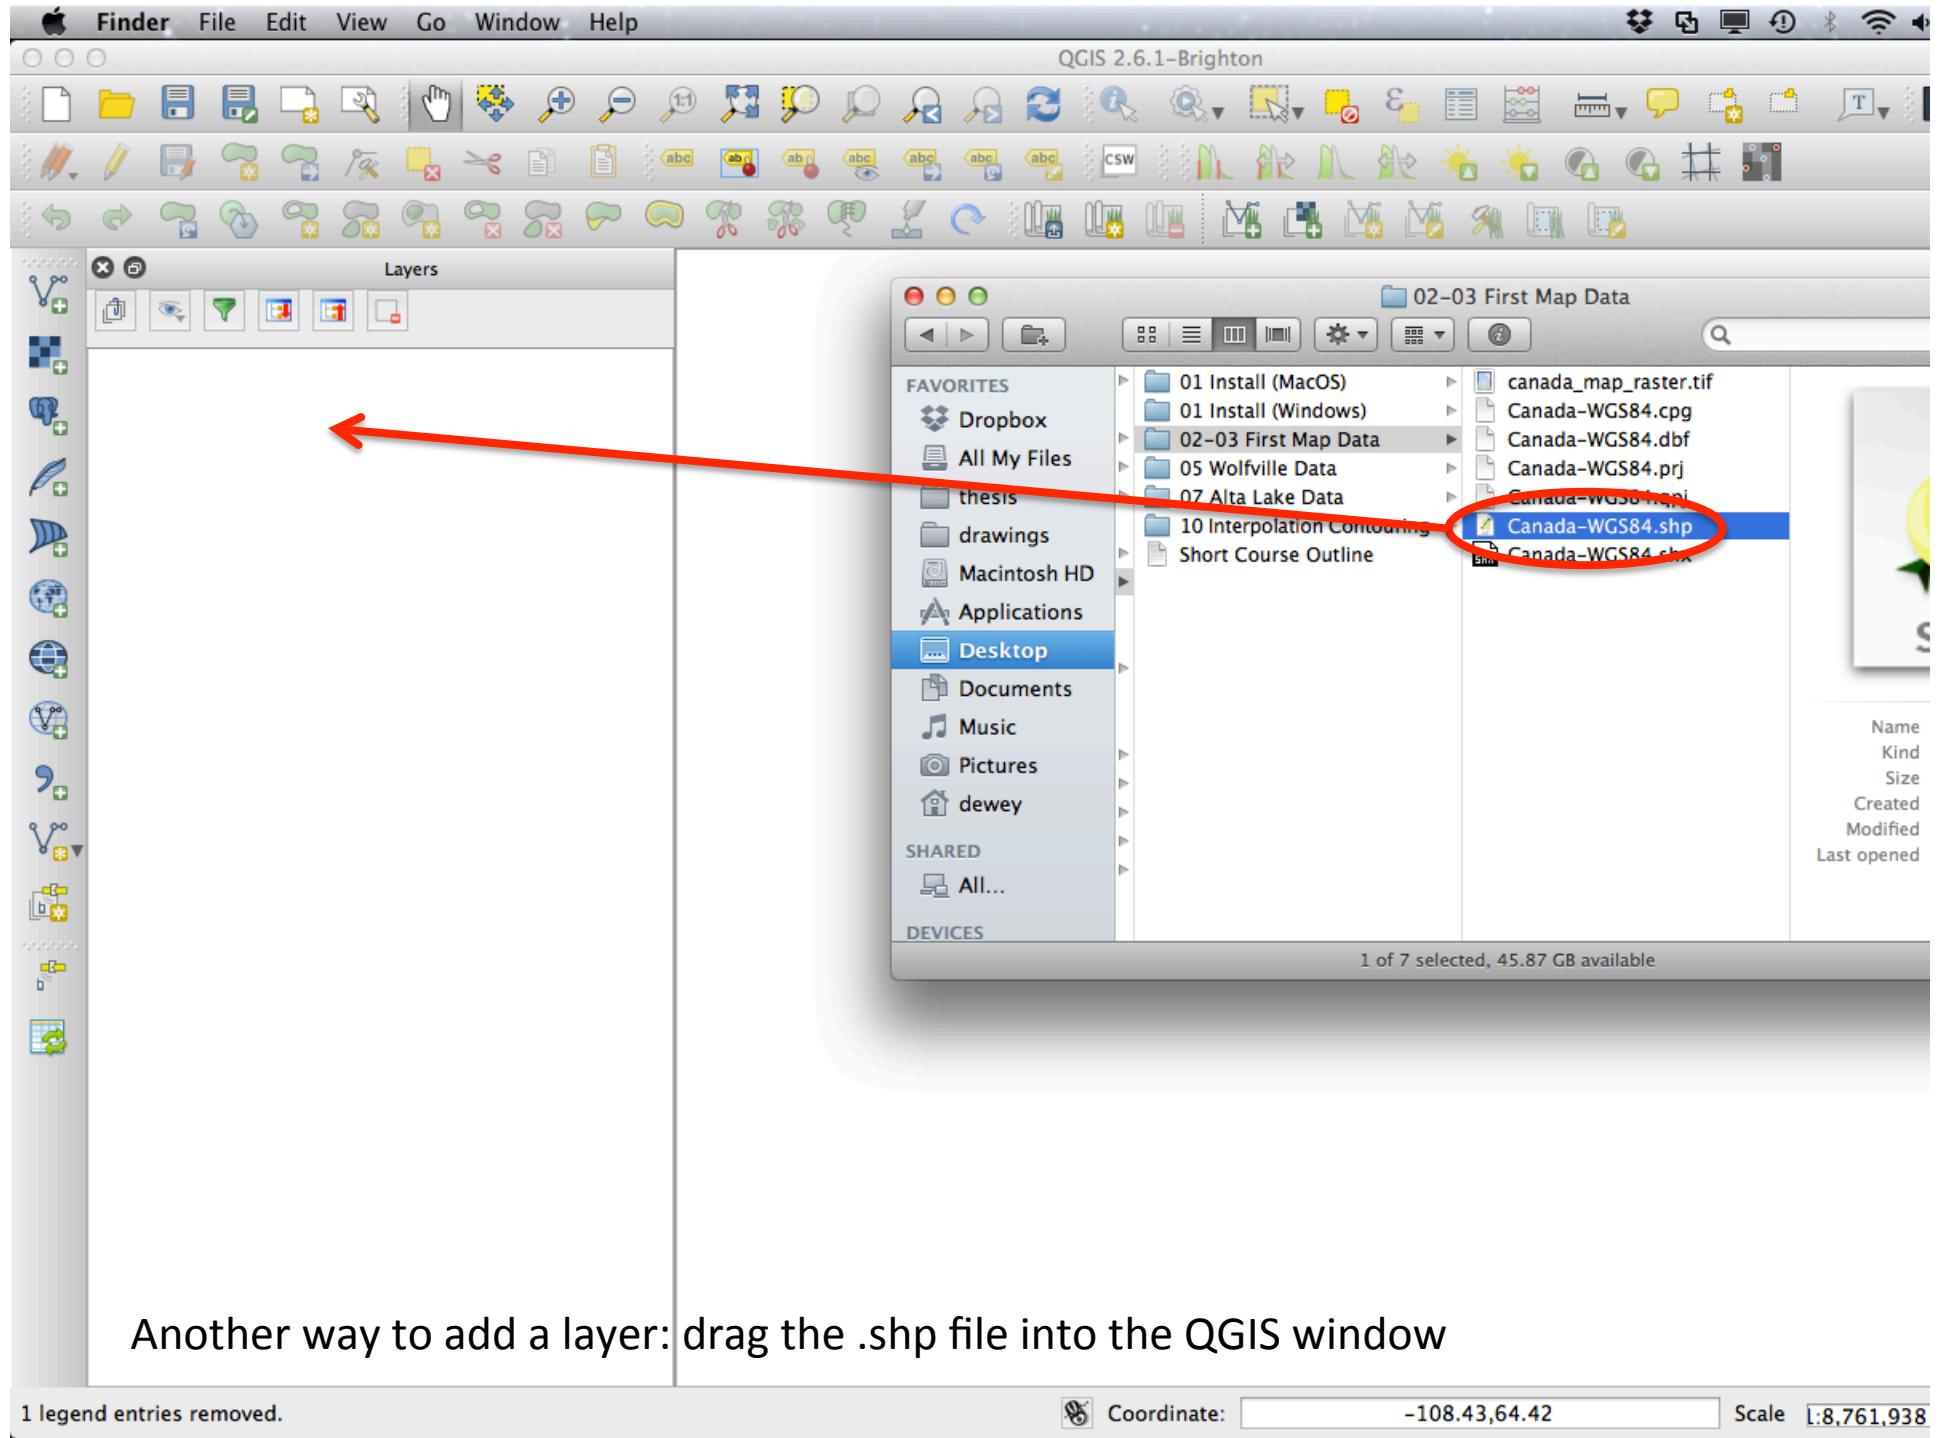

1 legend entries removed.

Coordinate:

-138.40,71.68

Scale 1:8,761,938

Another way to add a layer: drag the .shp file into the QGIS window

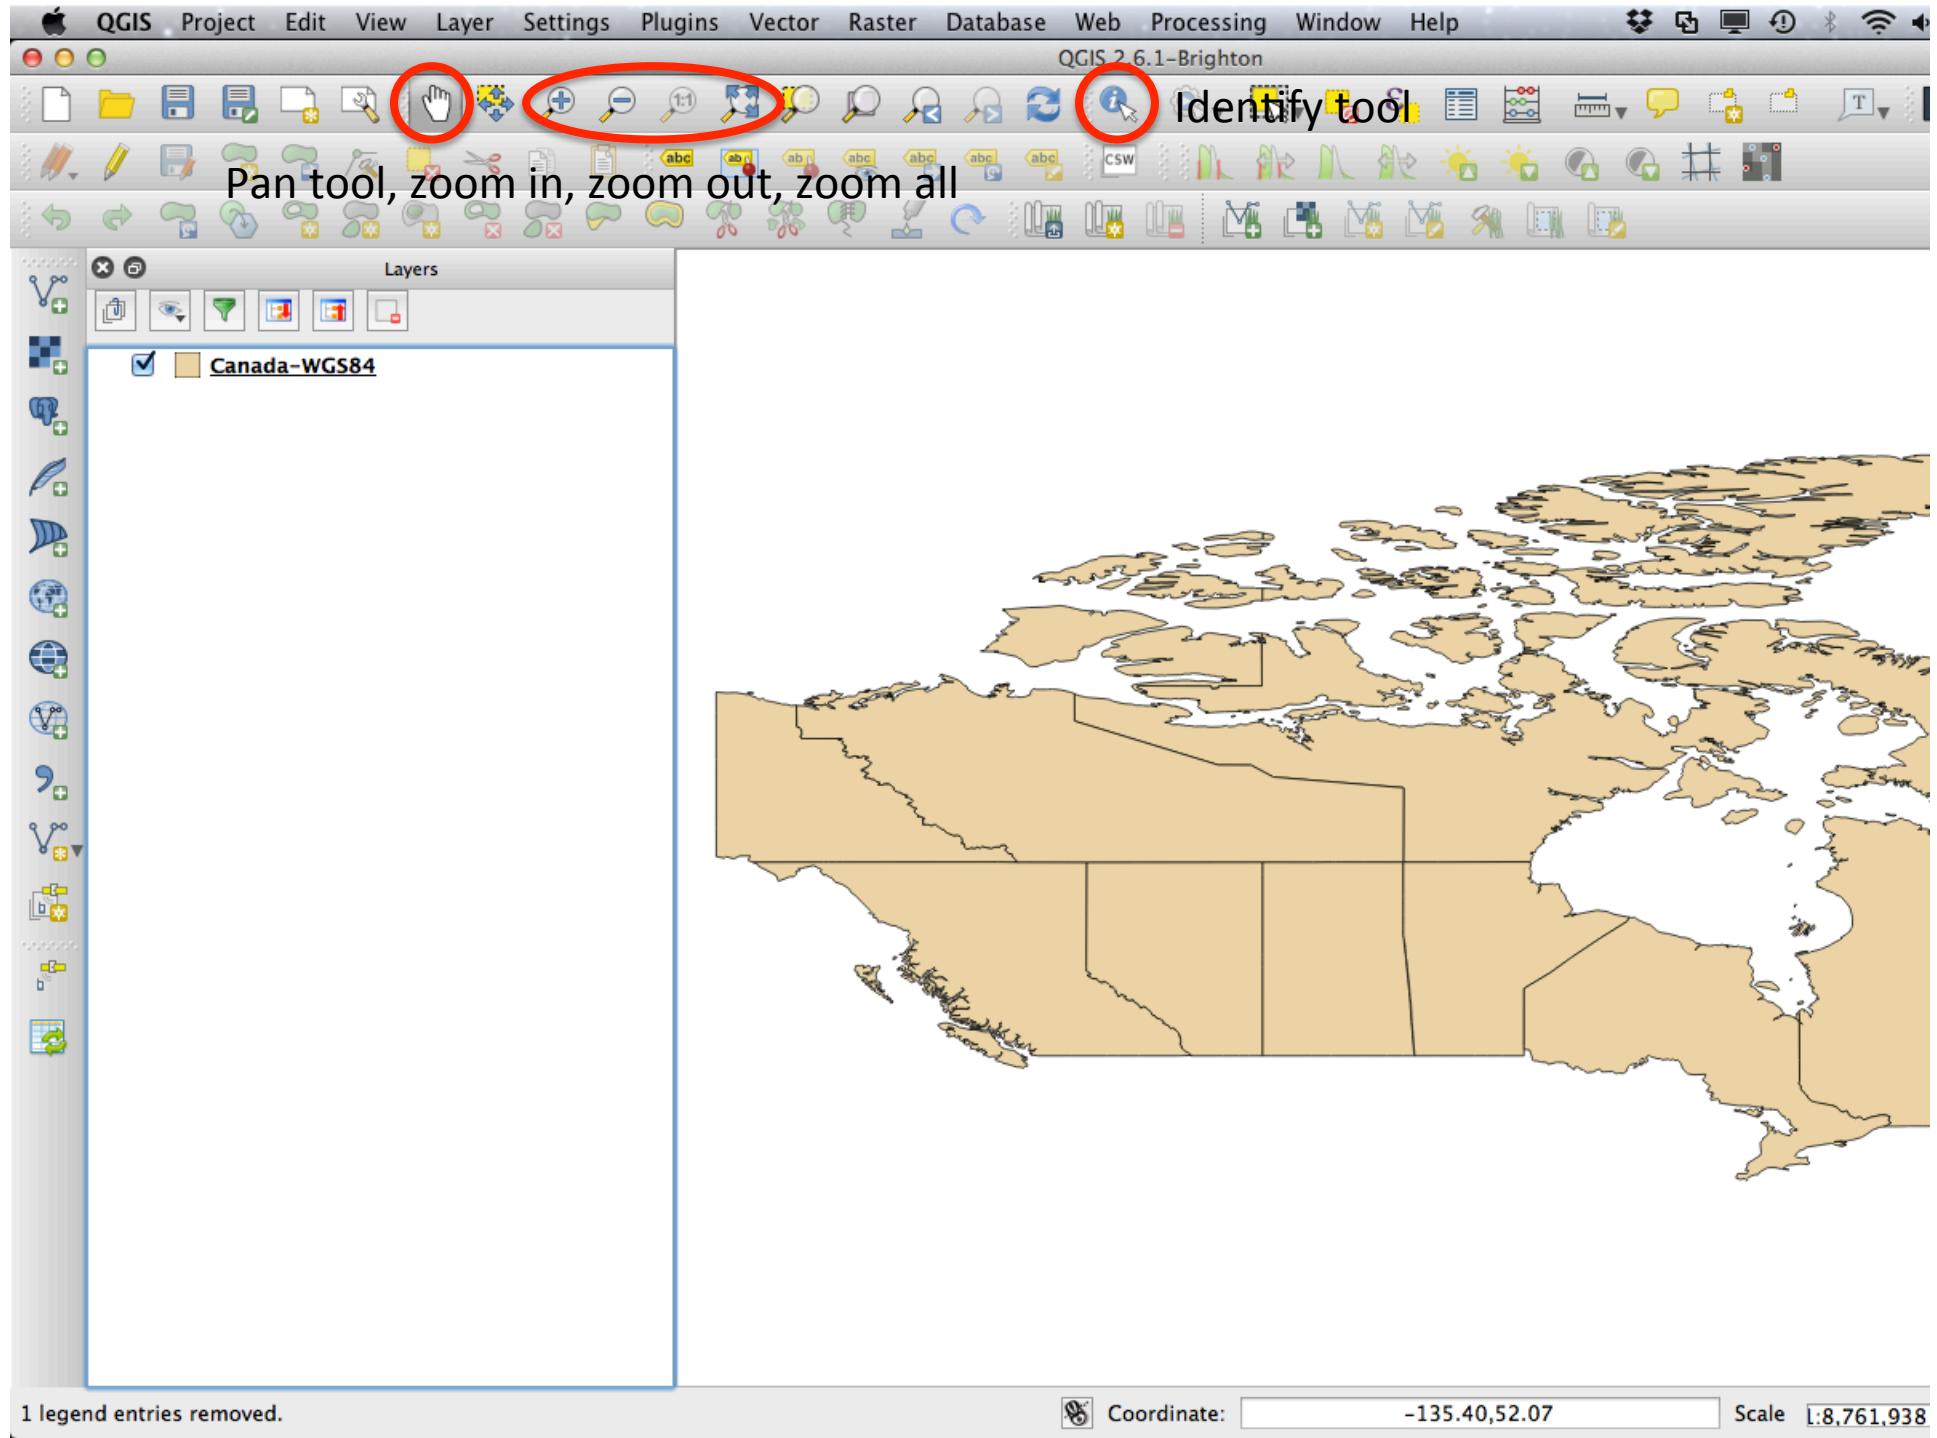

1 legend entries removed.

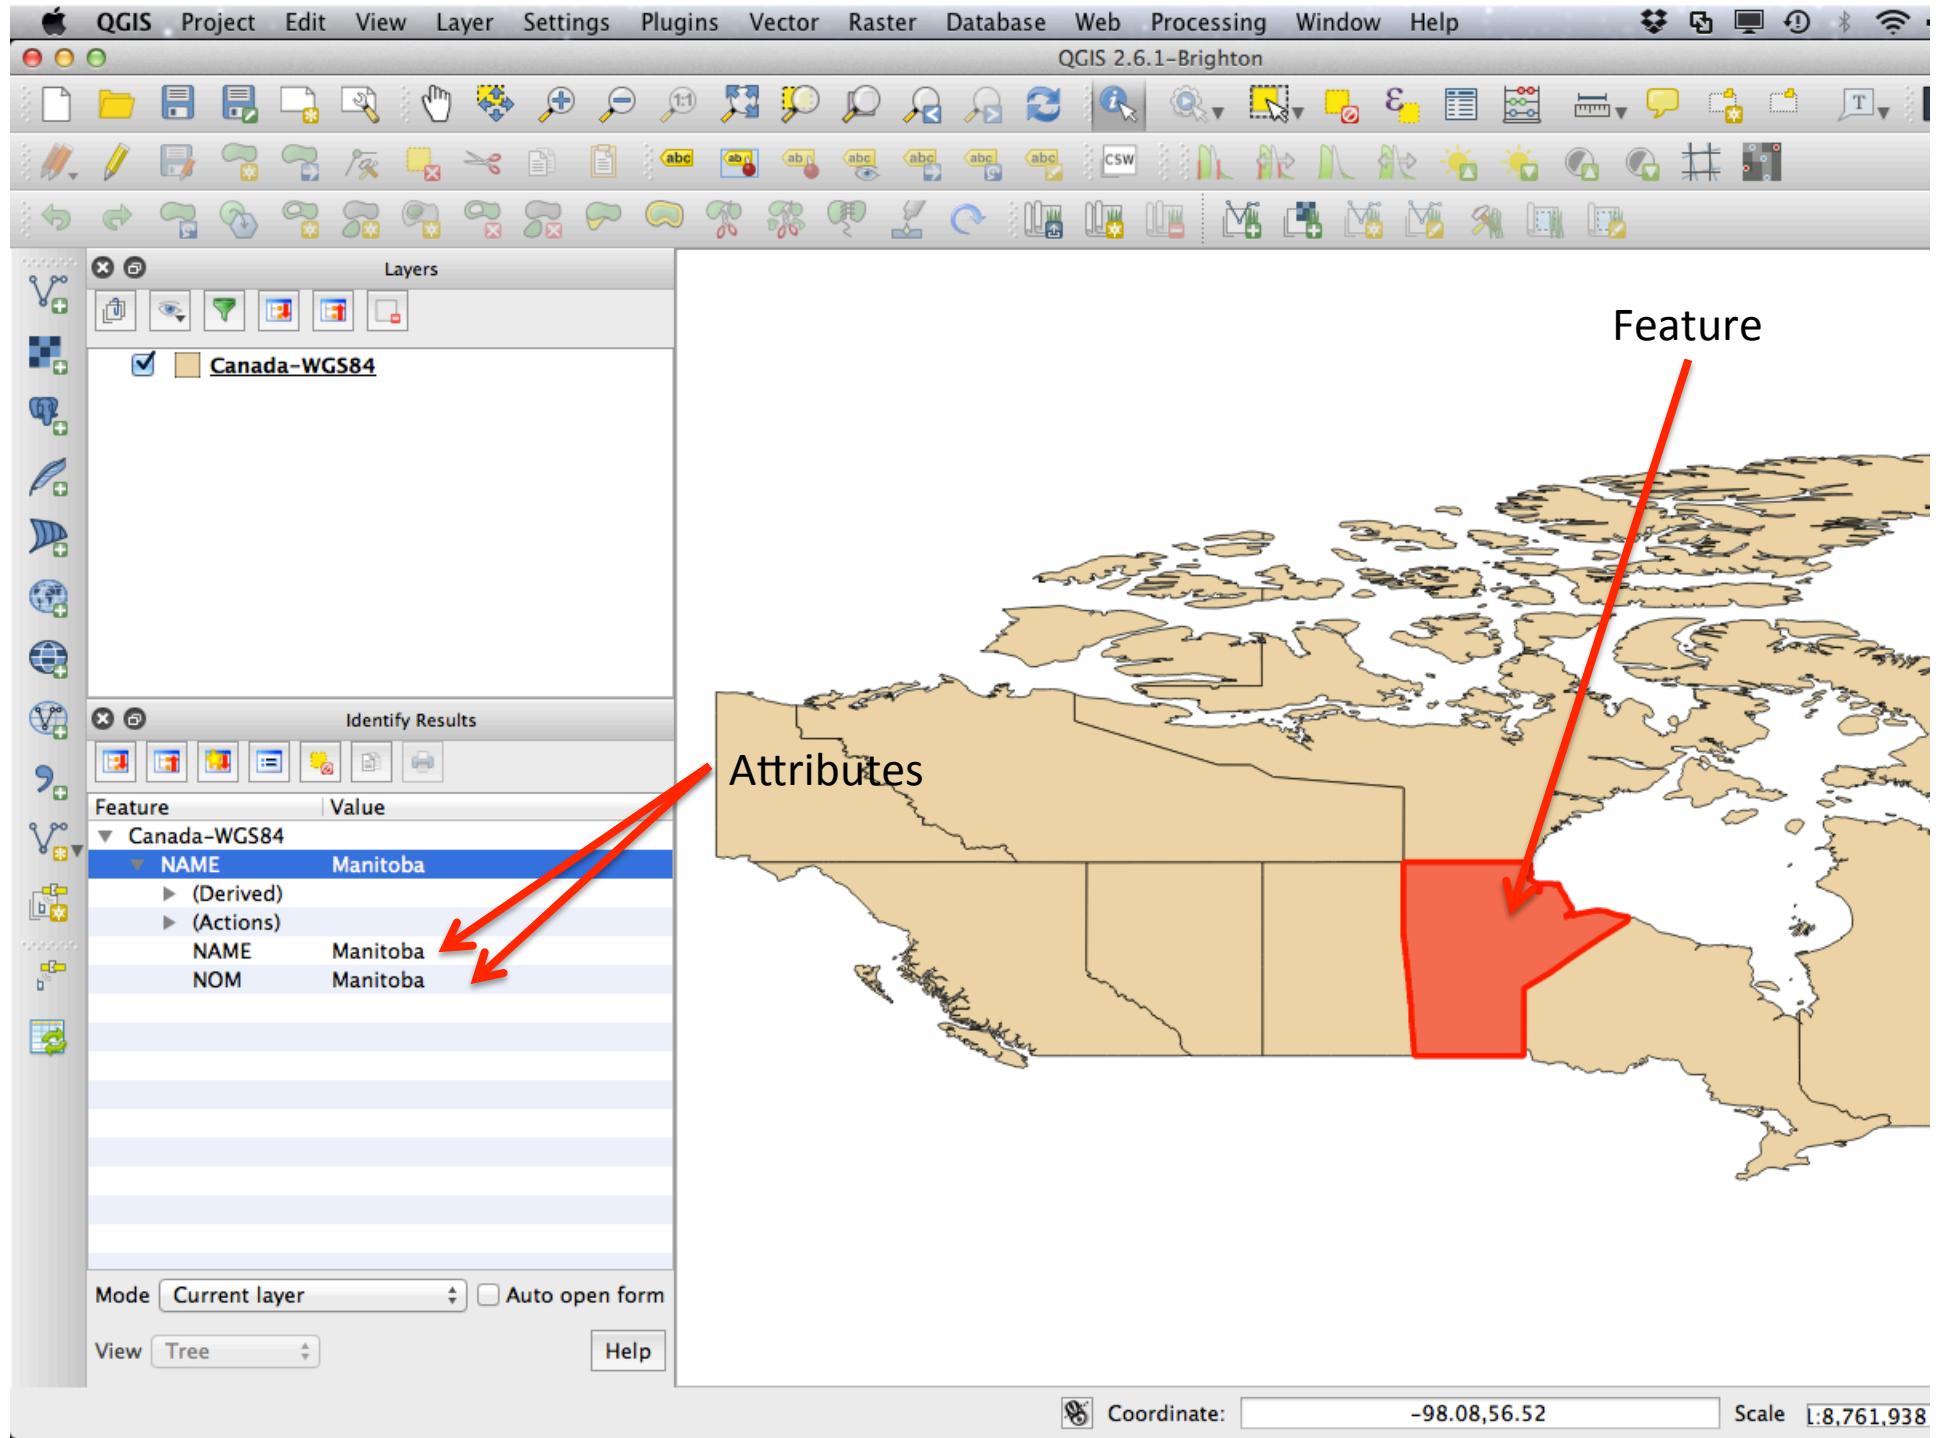

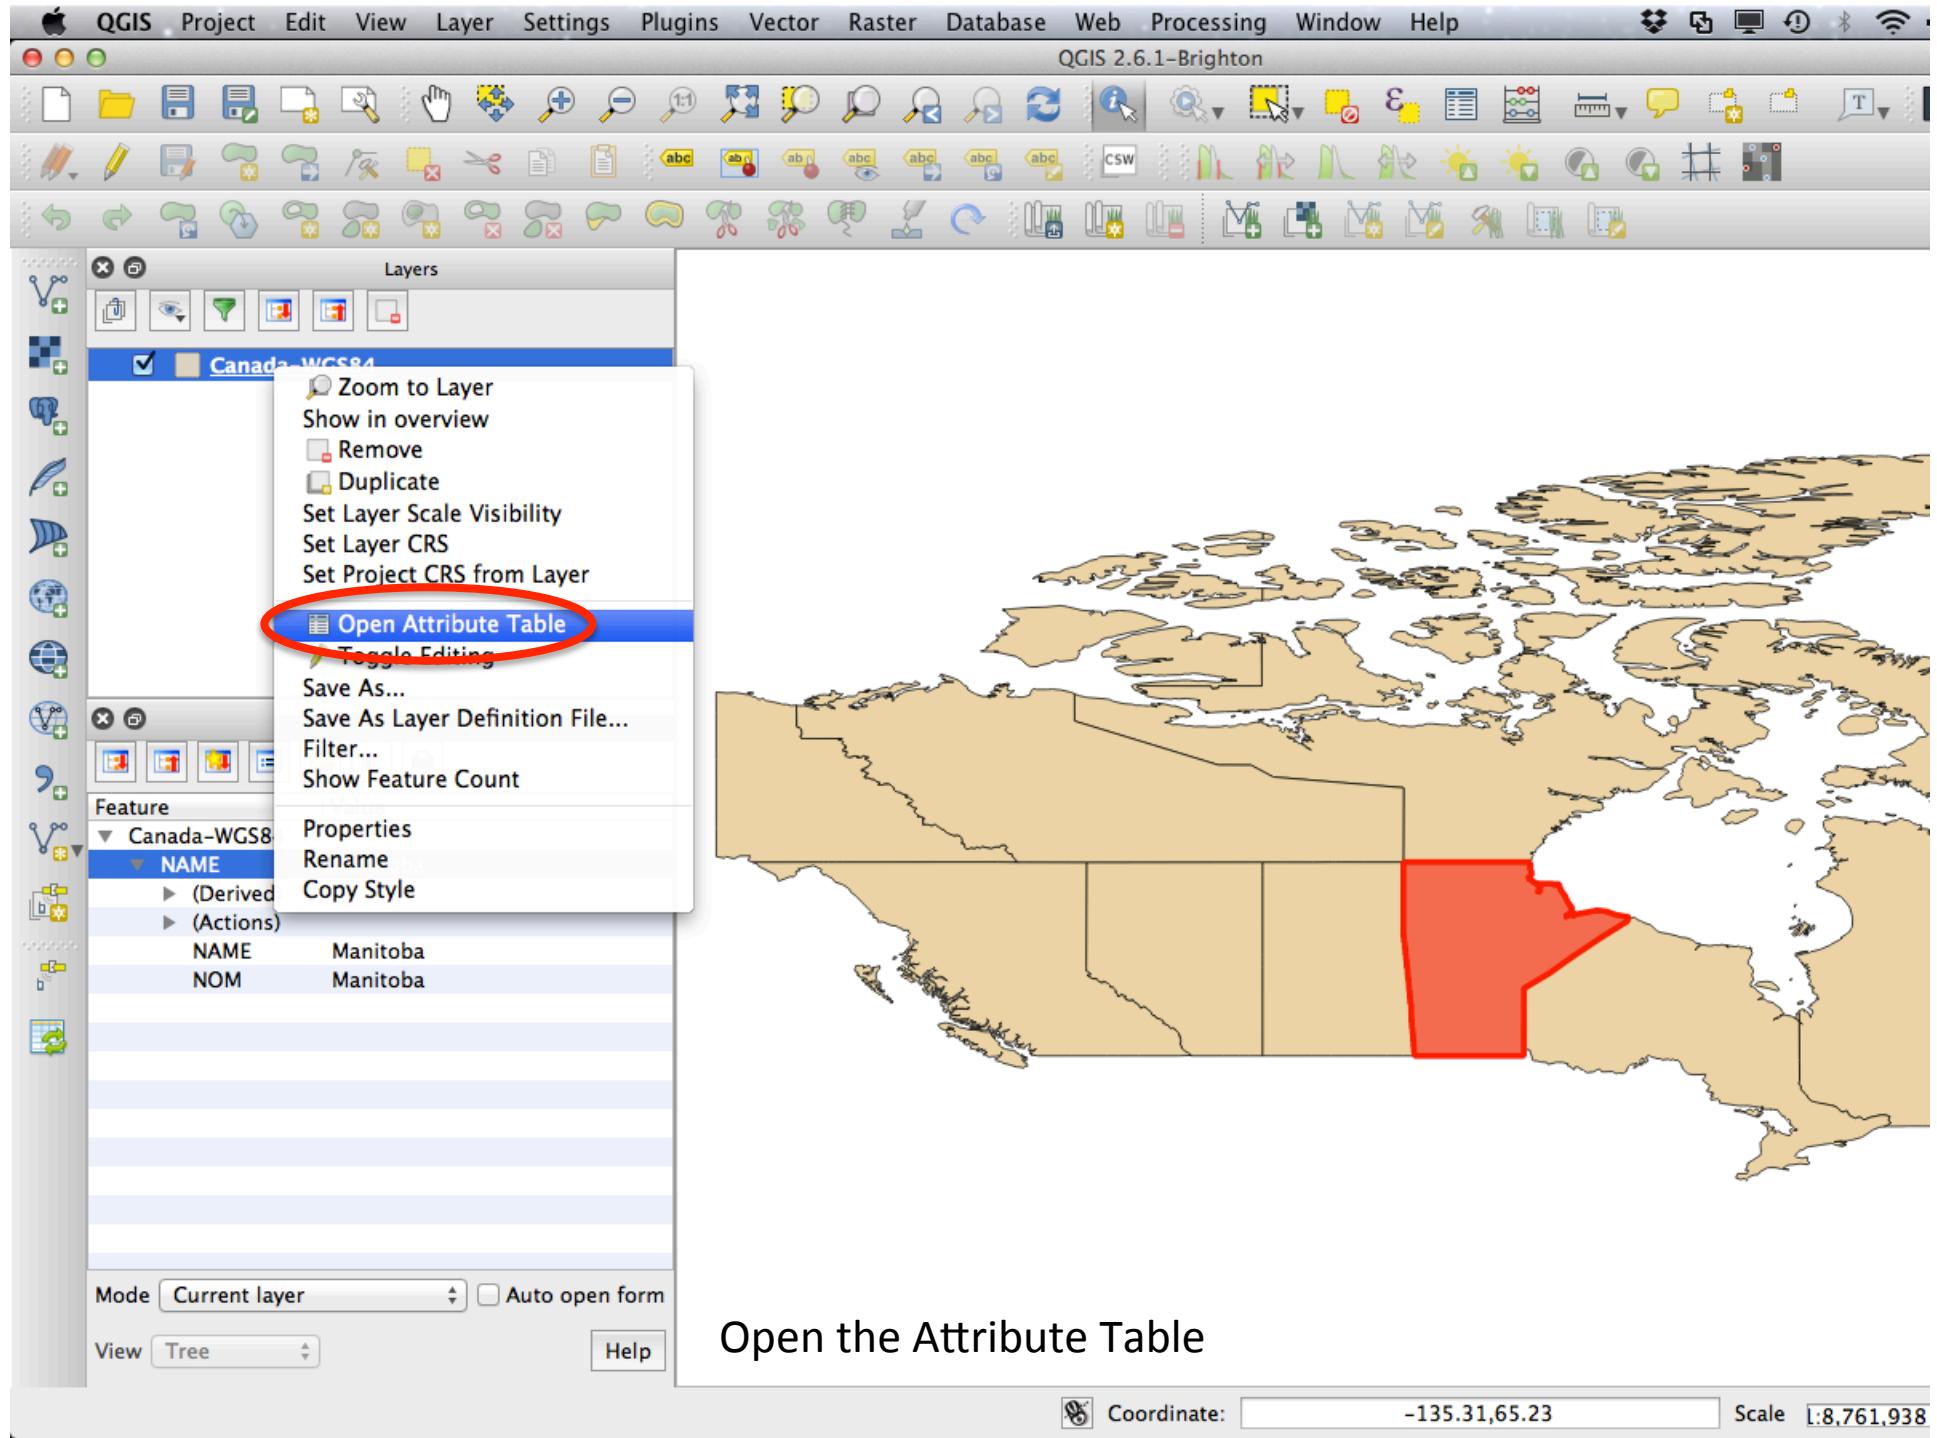

Coordinate:

-108.43,64.42

Scale 1:8,761,938

QGIS 2.6.1-Brighton

The screenshot displays the QGIS application interface. The main window shows the 'Attribute table – Canada-WGS84' with 13 features listed. The 4th feature, 'Newfoundland and Labrador', is selected and highlighted with a green border. A red circle is drawn around the 'Zoom to selected features' button in the toolbar. The map view on the right shows the geographical extent of the selected feature. The status bar at the bottom indicates '1 feature(s) selected on layer Canada-WGS84.' and provides coordinate and scale information.
